

Is your Rotating Plant protected against breakdown ?

New ME9601 Vibration Monitoring System

Have you thought of using Condition Monitoring, but never seem to have the time or budget?

Well, help is at hand with the *NEW* ME9601 Vibration Monitoring System ...and it couldn't be easier.

1. Just fix the sensor to your machine...
2. Connect it to the ME9601 box...
3. Set the two alarm levels...

and that's it... you're in business, all done in a few minutes.

The module will now monitor your machine... and if a fault develops on the machine, the system will attract your attention with the first of its two level alarms.

This gives you plenty of warning to plan the necessary maintenance, at a time which suits your programme with the minimum amount of disruption to your work schedule.

The ME9601 is extremely flexible in its use and can be used for monitoring sleeve and rolling element bearings in all rotating plant, such as motors, pumps, fans, gearboxes, conveyors, mills, etc. etc.

...and, all at unbelievable prices !

It's easy..

*Fix this SENSOR to
your machine...*

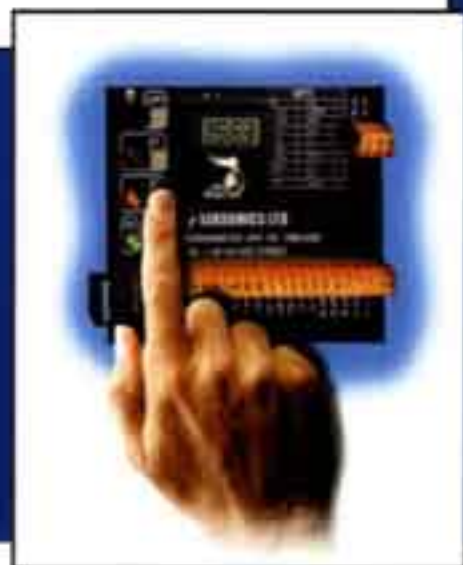

*then connect to the
ME9601 box...*

*set the two alarm
levels...*

and that's it...

*all done in a few
minutes*

Like to know more... Why not contact us and see how we can help you protect your valuable plant...
